

Steps for:	GCC	Visual Studio
Opening text editor for coding	Using vi or vim vim p02q1_2.c Press first "I" to edit , then enter code, then esc then :wq to save and exit	Open visual studio, create new project, find Visual C++, hit empty project, chose a name, go to the solution explorer, right click resource files, add > new item, name it and put .c instead of .cpp, then type code and save it!
compiling	gcc p02q1_2.c -o p02q1_2 -std=c99	Hit f5
debugging	Seeing errors that come up after compiling, going into vim and editing, re-running vim p02q1_2.c gcc p02q1_2.c -o p02q1_2 -std=c99	F5 and editing, f5 again and again
executing	./p02q1_2	F5 or ctrl f5
Size of executable file and which is bigger?	Executable file is 8648 bytes	It tells me it is 657 bytes
